Prateek Arora

pratique@umd.edu | pratiquea.github.io | pratiquea | pratiquea | 5004 Roanoke Pl, College Park, MD

Research Interests: Computer Vision and Artificial Intelligence.

Education

- **University of Maryland** — College Park, MD
  Master of Engineering in Robotics — *August 2018 – Present*
- **GGSIPU University** — New Delhi, India
  Bachelors in Electrical and Electronics Engineering — *2012–2016*

Experience

- **Research Assistant** — *with Prof. Yiannis Aloimonos*
  Perception and Robotics group, University of Maryland — *August 2018 – Present*
  Quadrotors, 130 size
  Designed a hardware sensor and compute suite "PRGEye" consisting of a global shutter camera, an IMU and ToF distance sensors, a microcontroller and a microprocessor. Also, I implemented point to point trajectory following on quadrotor using cascaded PID.
- **Research Associate** — *with Prof. Sujit and Sanjit Kaul*
  Indraprastha Institute of Information Technology (IIIT), Delhi, India — *July 2017 - July 2018*
  Self-driving car (ROS)
  Worked on traffic light detection in Indian traffic environment and system integration of software stack of the self driving car at IIIT-D named "Swarath". Also, developed lane cost algorithm to replace binary cost map and integrated it with OMPL.
- **Research Assistant** — *with Prof. Gargi Mishra*
  Guru Gobind Singh Indraprastha University, India — *August 2014 - Jan 2016*
  Worked on Gaze controller robot controlled using movement of eyes for Quadriplegic patient.

Projects

- **Deep Homography Net, Supervised and Unsupervised**: Implemented Supervised and Unsupervised network to learn homography between two images using TensorFlow.
- **Structure from Motion (Monocular)**: Reconstructed 3D scene and simulatneously computed camera pose using multiple views from a single camera.
- **Video SnapCut**: Implemented tracking of a **deformable object** in a video (given initial object boundary) using set of local classifiers (a feature available in **Adobe After Effects**).
- **Face swap**: Implemented an end-to-end pipeline to swap faces in a video (just like Snapchat's face swap filter) using both **Delaunay Triangulation** and **Thin Plate Spline**.
- **Boundary detection using Pb-Lite**: Boundary detection in image using a modified "Probability of Boundary" method. The probability is measured by computing changes in texture and brightness in the local neighborhood.
- **Flying through gaps**: Implemented Gaussian-Mixture-Model to detect colored windows and used it as a feedback to autonomously navigate a drone through it.

Publications

- **Mobile Surveillance Spheroid Robot with Static Equilibrium Camera, Leaping Mechanism and KLT algorithm based Detection with Tracking**: Shamsheer Verma, Chahat Deep Singh, Sarthak Mittal, **Prateek Arora** and Arvind Rehalia.International Journal of Control Theory and Applications, 09(41) 2016, 473-488. ISSN: 0974-5572. (Link)
- **Control of wheelchair dummy for differently abled patients via iris movement using image processing in MATLAB**: **Prateek Arora**, Anshul Sharma, Anmoal Singh Soni, Aman Garg, IEEE INDICON 2015, doi: 10.1109/INDICON.2015.7443610 (Link)

Relevant Courses

- **CMSC426 - Computer Vision**: Fall 2018 — *by Prof. Yiannis Aloimonos*
- **CMSC733 - Computer Processing of Pictorial Information** : Spring 2019 — *by Prof. Yiannis Aloimonos*
- **ENAE788M - Hands On Autonomous Aerial Robotics** : Fall 2019 — *by Prof. Yiannis Aloimonos*

Skills

Computer Languages: C++, Python, Matlab, LaTeX
Operating System: Linux, Windows
Softwares/Libraries: Tensorflow, Numpy, Matlplotlib, Jupyter, Eagle
